Flea Treatment Preparations

1. Pick up floors: toys, clothes etc...
2. We highly recommend pilot lights or open flames to be extinguished during the fogging process.
3. Thoroughly vacuum and dispose of its contents outside. Vacuuming helps eliminate eggs and larvae before treatment is performed, especially in areas where your animals sleep.
4. People and pets need to be out of the home for at least 4 hours.
5. All floors and upholstery will be treated along with the fogging treatment.

Post Flea Treatment Procedures

1. Make sure pets are on a treatment before they return (Advantage etc...)
2. Make sure all flooring is dry before allowing people or pests to re-enter home
3. Do not vacuum or clean flooring for at least 24 hours after treatment
4. You can expect a resurgence of fleas after 3 or more days. The standard timeframe for treatment to be effective is 21 days

NOTE: UPON ENTERING YOUR HOME, IF OUR TECHNICIAN FEELS THE ABOVE INSTRUCTIONS WERE NOT PERFORMED, THE GUARANTEE WILL BE VOID
